Hello Warren,

Demography Division does not consult with BC Stats regarding the telephone landlines. The data is forwarded to us from BC Stats and used to produce our estimates.

For methodological issues, please contact BC Stats directly at:

<http://www.bcstats.gov.bc.ca/phones.asp>

I hope this information helps. Please do not hesitate to contact me again, should you have further questions or comments.

Best regards,

Nicole Montsion

Objet : population estimation methods

Hello,

Thank you for answering my questions about Statistics Canada's annual estimation of intraprovincial migration by pointing me to BC's Official Statistical agency, BC Stats.

BC Stat's recently revised population estimation methods paper refers to the past use of telephone landlines along with electrical landlines to estimate population.

Two questions:

When was Statistics Canada first informed by BC Stats of the use of these two indicators to estimate population change?

Did Statistics Canada provide feedback to BC Stats about problems with the use of these two indicators?

Thank you,

Warren Munroe, M.A.
